

AIVID TechVision Platform

Automating Critical
Repetitive Human
Visual Inspection Tasks

Standard operating procedures are crucial for security, safety, and improving operational efficiency. AIVID leverages AI and Deep Learning to automate mundane, repetitive, and manual process inspections, empowering businesses to mitigate the risk of non-compliance and strive towards a safe and high-quality workplace. The platform aggregates camera feed data for automated inspection reports and drives visual process improvement based on real-time insights. It enables decision-makers in a wide variety of verticals to automatically inspect standard operating procedures across multiple locations with central control for security, safety, workplace, and hygiene compliance.
