

“ This market-ready solution with pre-installed software offers our customers an easy-to-deploy product for automating edge device management for SD-WAN networks.”

Allan Chiu,
VP of Network &
Communication Solutions
NEXCOM

5G uCPE for Virtual Edge Services Management

The joint NEXCOM-Telco Systems offering is based on NEXCOM's DTA 1164W, a 5G-ready desktop uCPE, pre-installed with Telco Systems' Edgility smart edge computing software. With full support for 5G/IoT connectivity, this solution comes ready to support a wide range of cloud native deployments, while its flexible configuration easily adapts to today's dynamic IT environments. It's an easy-to-deploy solution for automating edge device management for SD-WAN networks, has FWA connectivity to connect to multi IoT seamlessly, and a PoE+ to power on connected devices in areas with limited quantity of power outlets and extension cords.
