

AI is entering a new stage. GDDi's leading AI capabilities can help us respond to market demands more quickly and help more customers achieve low-cost and efficient business upgrades."

CEO, Large Retail Business in China

GDDi Algorithms Defined Edge AIBox

Empowering Businesses with Accessible Computer Vision with Automated AI Algorithm Training

Today's businesses are generating more data than ever before, yet harnessing its value can be challenging. Traditional machine learning algorithms, necessary for extracting insights, often require prohibitively expensive data science teams and algorithm engineers. To help overcome this challenge, GDDi created their GDDi Algorithms Defined Edge AIBox based on Intel® processors. This automated AI training platform empowers organizations of all sizes to obtain and effortlessly deploy customized AI models. Powered by GDDi's AutoML technology, the solution automates AI algorithm training by applying one of over 200 case-specific machine learning algorithms to the customer's data, significantly reducing development time and costs associated with traditional methods.

Key Features	Extensive Algorithm Marketplace	Automatic AI Training	No-code AI Modeling
--------------	---------------------------------	-----------------------	---------------------

Vertical:

- Government
- Energy
- Agriculture
- Banking/FSI
- Hospitality and Restaurants
- Manufacturing
- Retail
- Transportation

Use Cases:

- Asset & Operations Optimization
- Control Optimization & Autonomy
- Energy Monitoring & Management
- Logistics & Tracking

Country/Geo:

- East Asia
